CORE DEVOPS SKILLS

- Linux fundamentals & Bash scripting
- Python for automation & tooling
- Git & GitHub (branching, PRs)
- Docker (images, Dockerfiles)
- CI/CD concepts (GitHub Actions)
- AWS fundamentals (EC2, S3, IAM)
- SQL & database management
- YAML / JSON configuration

CURRENTLY BUILDING

- Kubernetes basics
- Terraform / Infrastructure as Code
- Monitoring (Prometheus & Grafana)

ADDITIONAL TECHNICAL

- Java full-stack development
- JavaScript & web technologies
- C (basics)
- MATLAB & Simulink

EDUCATION

Master's in Software Engineering
EPITA School of Engineering and Computer Science
2025 – 2026

Bachelor's in Electrical & Electronics Engineering
JNTUH
2022

LANGUAGES

- Telugu — Native
- English — Fluent
- French — Intermediate

SRIRAM KOLLURI

DEVOPS ENGINEER INTERN

PROFILE

Master's student in Software Engineering transitioning into DevOps, with hands-on experience automating data pipelines, managing SQL-backed reporting systems, and collaborating across engineering and analytics teams. Comfortable in Linux environments and scripting with Python, with growing exposure to Docker, CI/CD, and cloud infrastructure. Brings a systems-and-process mindset from prior electrical engineering work, and a track record of ensuring accuracy, quality, and reliability in technical deliverables.

PROJETS

DevOps Portfolio Project — Full-Stack Web App, Containerized & Cloud-Deployed **2026**
Personal project | github.com/SRIRAMKOLLURI92/DevOps-portfolio-project-alpha

- Built a full-stack web application from scratch (Python/Flask backend with REST API endpoints, HTML/CSS/JavaScript frontend) and version-controlled it with Git, publishing to a public GitHub repository.
- Containerized the application with Docker, writing a custom Dockerfile and publishing the image to Docker Hub for portable, environment-independent deployment.
- Provisioned cloud infrastructure on AWS (EC2 instance, security groups, IAM users) using Terraform, applying Infrastructure-as-Code practices instead of manual console setup.
- Deployed and ran the containerized application on a remote Linux (Amazon Linux) server, configuring SSH access, Docker installation, and network security rules for public availability.
- Currently extending the project with an automated GitHub Actions CI/CD pipeline to build, push, and redeploy the app on every code change.

EXPERIENCE

Associate Data Analyst **Jan 2023 – Sep 2024**
Deepen.AI India (Aecsine Software Solutions), Hyderabad

- Automated recurring data extraction and reporting workflows, reducing manual processing time and improving turnaround for stakeholders.
- Built and maintained SQL-backed dashboards to surface business performance metrics.
- Collaborated with cross-functional engineering teams to define data requirements and ensure clean, reliable pipelines.
- Ran regular audits and validation checks to catch data-quality issues before they reached production reports.

ACHIEVEMENTS

- Ranked “Best Project Document” and 2nd Best Project in BSc final-year projects.
- Awarded “Office Explorer” and “POD Train Head” recognitions.
- Volunteered in tech-management roles for government examinations and campus fest coordination.
